

BENEFITS

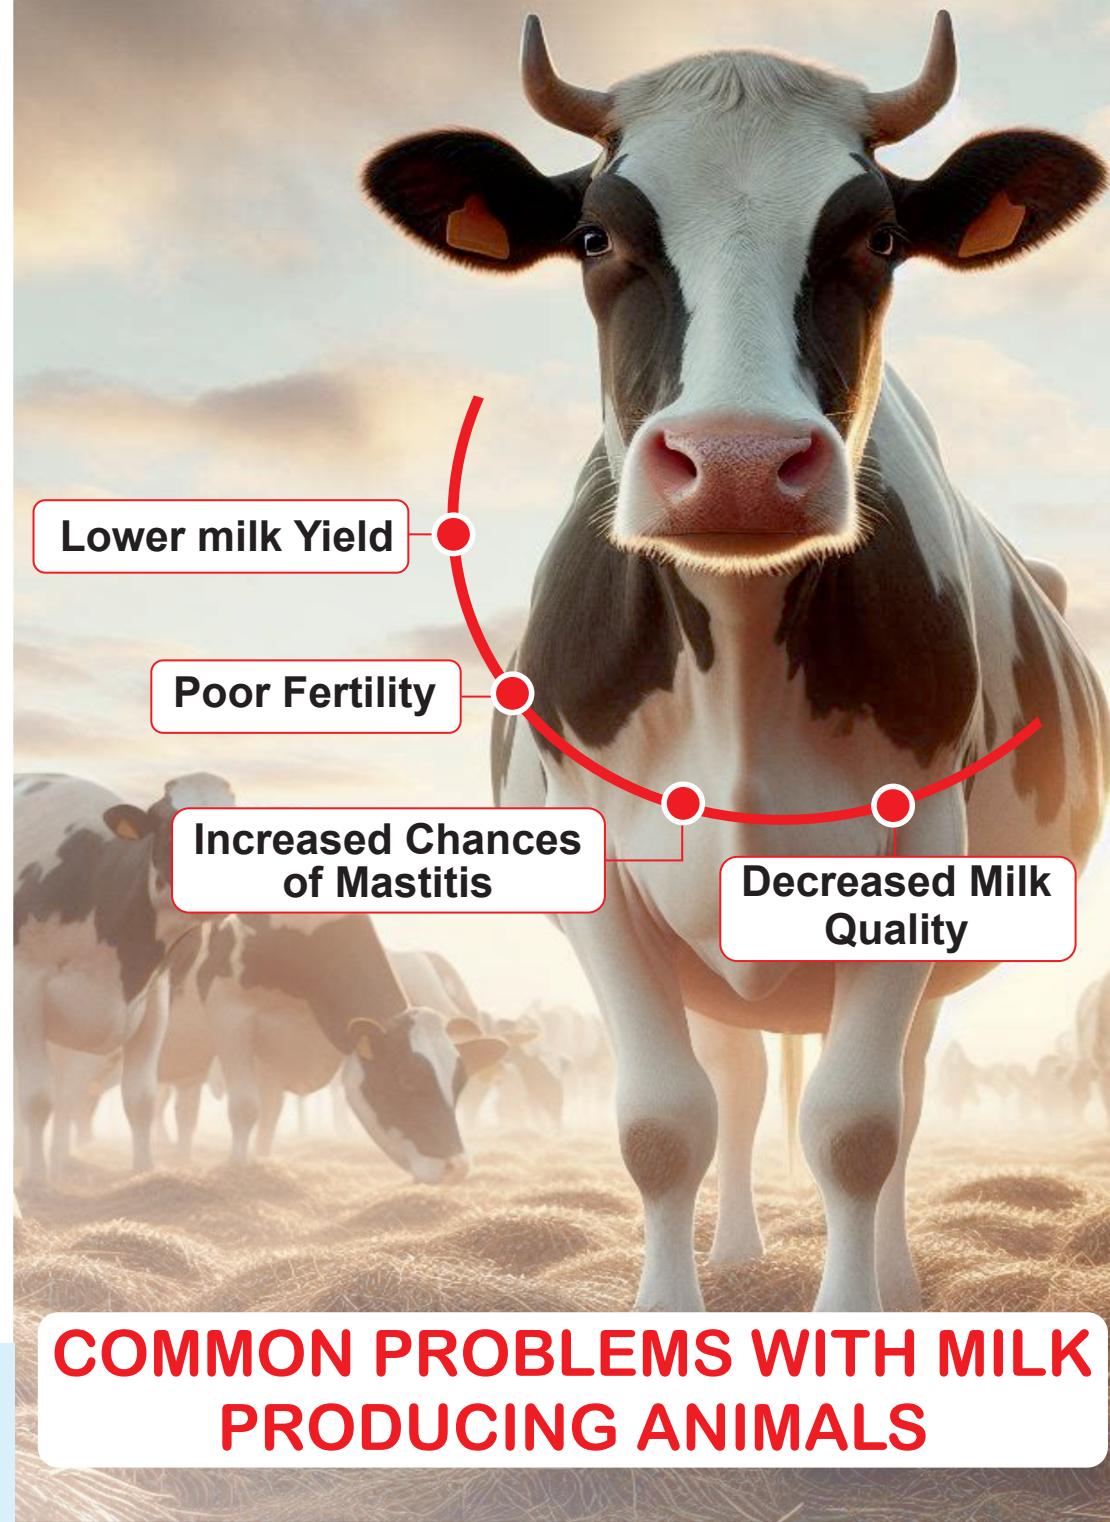

- Increases milk production and improves milk fat.
- Enhances fertility and improves the condition of oestrus.
- Improves body weight
- Immunomodulator action reduces the chance of mastitis.

RECOMMENDED USAGE

Cattle/Buffalo: 1-2 bolus daily for 10-20 days
Goat/Sheep: ½ bolus daily for 10-20 days
or advised by a Registered veterinarian/consultant

Pack Size
**10x2 boli
in a unit
carton**

Fortified with Neunamins

MILKY VET BOLUS is a Milk Enhancer bolus fortified with Carbon technology based Nano minerals, Calcium, phosphorus, Essential Vitamins and galactagogue herbs.

COMPOSITION:

Each bolus contains:

Calcium.....	2000 mg	Manganese Neunamin	80000 mcg
Phosphorus.....	1000 mg	Copper Neunamin.....	28000 mcg
Vitamin A.....	50000 IU	Iron Neunamin.....	32000 mcg
Vitamin D.....	25000 IU	Selenium Neunamin.....	800 mcg
Vitamin E.....	100 mg	Iodine Neunamin.....	3200 mcg
Biotin.....	20000 mcg	Chromium Neunamin	1600 mcg
Cobalt sulphate.....	20 mg	Leptadenia reticulata.....	1000 mg
Nucleotides.....	1000 mg	Asparagus racemosus.....	1000 mg
Zinc Neunamin.....	80000 mcg		

NEUNAMINS

Neunamins are the carbon technology based nano-minerals which improves the health of your cattle in the following ways:

Galactagogue

Iron Neunamin, Chromium Neunamin, Iodine Neunamin

Helps in the formation of blood, increases the metabolism of glucose and mammary epithelial cells, which are responsible for milk synthesis and secretion during lactation which acts as galactagogue.

Fertility modulator

Zinc Neunamin, Manganese Neunamin, Copper Neunamin, Iron Neunamin, Selenium Neunamin, Iodine Neunamin and Chromium Neunamin

It Improves conception rate, regulates follicle development, lower incidence of retained placenta and reduces effects of anoestrus.

Immunity

Zinc Neunamin, Copper Neunamin, Selenium Neunamin, Chromium Neunamin

- Faster regeneration of keratin lining of teat canal
- Strengthens antioxidant system provides stronger udder defence system

Milk Enhancer Bolus Fortified with Nanominerals

Mechanism of Action

GALACTAGOGUE

Lactogenesis: (Developing the ability to secrete milk and involves the maturation of alveolar cells)

Ingredients such as Calcium, phosphorus, Vitamin A, Vitamin D and phytogenic extract such as Asparagus racemosus helps enhances the blood prolactin level and stimulates the cellular division of the mammary gland.

Galactopoiesis: (Maintenance of milk production for a long period)

Asparagus racemosus, chromium Neunamin, Iron Neunamin, Iodine Neunamin, Biotin, Vitamin A, Vitamin D, Vitamin E helps to maintain the milk production in the cattle.

MILK FAT ENHANCER

Leptadenia reticulata contain α -amyrin, β -amyrin, ferulic acid, luteolin, diosmetin, rutin, β sitosterol, stigmasterol and hen triacontanol which helps to increase the milk fat of milk.

SUPPORTS LET DOWN OF MILK

Ingredients such as Calcium, phosphorus, vitamin A and phytogenic extract such as Asparagus racemosus helps enhances the blood prolactin level.

Prolactin level helps to enhance the level of oxytocin secretion which stimulates the mammary gland contraction and helps in the easy milk let down.

IMPROVES FERTILITY

(Zinc Neunamin, Manganese Neunamin, Copper Neunamin, Iron Neunamin, Selenium Neunamin, Iodine Neunamin and Chromium Neunamin)

Improves luteolysis, embryogenesis process and increases estradiol synthesis. Estradiol stimulates gonadotropin-releasing hormone responsible for the preovulatory luteinizing hormone surge.

It Improves conception rate, regulates follicle development, lower incidence of retained placenta and reduces effects of anoestrus.

IMMUNOMODULATOR ACTION REDUCES THE CHANCES OF MASTITIS

(Zinc Neunamin, Copper Neunamin, Selenium Neunamin, Chromium Neunamin, Nucleotides)

Improves neutrophil, phagocytic activity and numbers to aid the immune system fight infection. It increases immunoglobulins G (IgG) concentrations in the colostrum. Immunomodulator action improves defense system and reduces the chance of impending infections.

Faster regeneration of keratin lining of teat canal; Strengthens antioxidant system provides stronger udder defence system
